

Upskill, Reshape, and Lead
Future-Proof Your Tech Career with GenAI & Autonomous Agents.

HERE AND NOW AI

Designed with passion for innovation

For technology professionals—whether you're a seasoned developer in React, Java, or Python, or an expert in cloud and infrastructure—the tectonic shift caused by Generative AI is undeniable. The ability to build, integrate, and deploy AI agents is rapidly becoming the new benchmark for technical seniority and innovation.

HERE AND NOW AI, an AI product engineering firm that has evolved from a deep-research institute, is uniquely positioned to guide your transition. We don't just theorize; we deploy approximately 10 smart agents *daily* for enterprise clients. Our training is a direct distillation of our production floor expertise, designed to help you leverage your existing skills to master the next frontier of software.

How Our Python, GenAI, & RAG Agents Program Will Advance Your Career:

1. Systematically Upskill from Your Current Role.

Our curriculum is engineered for professionals. It respects your experience while rapidly building your capabilities in the areas that matter most.

- **Master the Foundations:** Solidify your understanding of modern AI workflows with comprehensive tutorials like "LangChain from Scratch to Mastery" and our "LangGraph Tutorial," covering everything from basic chatbots to multi-agent collaboration (project-05-multi-agent-collaboration).
- **Build Production-Ready Skills:** Go beyond simple scripts. Learn to architect and deploy stateful, multi-actor applications, handle conditional routing (project-02-conditional-routing-chatbot), and integrate human-in-the-loop workflows (project-03-human-in-the-loop-chatbot).
- **Integrate AI with Enterprise Stacks:** Led by a CTO who specializes in integrating AI agents with enterprise systems, our program teaches you the practical skills needed to connect AI with the tools you already use, including databases, APIs, and cloud services.

2. Gain Hands-On Experience with Real-World Agentic Systems.

Our GitHub repositories are your sandbox for building the solutions that companies are actively seeking. You'll gain practical experience in:

- **Finance & Data Analysis:** Build agents that query stock prices (project_05_finance_agent_stock_price) or analyze CSV data (project_12_csv_analysis_agent).
- **Intelligent Automation:** Develop HR agents for policy Q&A (project_07_hr_agent_policy_qa), resume screening, and marketing agents for content generation.
- **Advanced Architectures:** Implement complex multi-agent workflows and understand the principles of Agent-to-Agent (A2A) and Model Context Protocol (MCP) integrations, core to our own AlaaS offerings.

3. Become an Architect of the Future, Not a Maintainer of the Past.

The demand is shifting from maintaining legacy systems to building intelligent, autonomous ones. This program equips you to lead that change. By mastering GenAI and RAG, you position yourself for senior roles—AI Engineer, Machine Learning Architect, and AI Product Lead—and become indispensable in a technology landscape increasingly driven by automation and intelligence.

Your experience got you here. Let us help you shape where you go next.
